Split the bale and feed the bale into a diet feeder

Bale slice cuts silage, hay & straw bales with ease

Bale Slice

MOREWAY LTD
ANIMAL HEALTH CARE INSTRUMENTS AND LIGHT FARM MACHINERY

Remove plastic and netting
While splitting the bale..

JAWS

Two extra wide plastic grips get a good hold of the plastic every time!

Features

- Innovative design, cutting up means the bale does not fall on the plastic when split and forces the plastic into the plastic grip at the top ensuring a strong hold every time.
- Can be used to split wrapped bales as well as hay and straw bales.

- Because of the wide grip bale slice will remove 90% of the twine from a hay or straw bale while splitting it.
- Split the bale on the feeding passage, or split it into the diet feeder.
- Bale slice uses hydraulic sequencing to operate the plastic grip therefore only requires one spool valve to operate the cutting jaw and the plastic grip.
- Can be fitted to any loader or tractor mounted front loader.

Technical Specifications:

W: 1.6m H: 1.7m D: 1.3m

Weight: 480kg

Hydraulic connection: Double acting (one spool)
